MI Lecture Note Series

Volume No. : 49

Title : **Development of Computer Algebra Research and Collaboration with Industry**

Editors :

Akira Terui (University of Tsukuba)

Katsuyoshi Ohara (Kanazawa University)

Tatsuyoshi Hamada (Fukuoka University)

Shun’ichi Yokoyama (Kyushu University)

Hirokazu Anai (Fujitsu Laboratories Ltd. / Kyushu University)

Hiroshi Yokota (Toshiba I.S. Corporation)

Written In : Japanese

ISSN : 1881-4042

Published In : 2013年8月9日

Contents:

Session 1 (Application to mathematics)

Solving problems of Goldberg for rational maps on the projective space ……1
Masayo FUJIMURA

Gröbner bases of Lauricella’s hypergeometric equations and its applications ……7
Nakayama Hiromasa

Markov chain Monte Carlo methods for the regular two-level fractional factorial designs and cut ideals ……14
Satoshi Aoki, Hidefumi Ohsugi and Takayuki Hibi

Session 2 (Computation and application of Groebner bases)

Transformation of lexicographic Gröbner bases to smaller systems ……25
Xavier Dahan

On QE Algorithms over algebraically closed field ……27
Ryoya Fukasaku, Inoue Shutaro and Yosuke Sato

Session 3 (Design of control systems)

An Effective Implementation of a Special Quantifier Elimination for a Sign Definite Condition by Logical Formula Simplification …… 33
Hidenao Iwane, Hiroyuki Higuchi and Hirokazu Anai

Two controller design procedures using SDP and QE for a Power Supply Unit……..43
Yoshinobu Matsui, Hidenao Iwane and Hirokazu Anai

Session 4 (Software)

Proposal of a search method for MathML Content Markup ……53
Akihisa Kataoka, Hiroshi Kai

MathLibre: distributable and customizable desktop environment for mathematics.....62
Tatsuyoshi Hamada

Session 5 (Education)

A hunting of operations with prime order on Rubik's Cube using computer algebra …69
Mitsushi Fujimoto, Masataka Tomari

On the Analysis of Sudoku Puzzles by Computers……..78
Takuya Kitamoto

Tutorial 1

Sparse interpolation and signal processing ……83
Annie Cuyt and Wen-shin Lee

Tutorial 2

Engine Control System Development and Symbolic Manipulation
- Application and Challenges in Modelling - ……87
Hisahiro Ito

Session 6 (Symbolic-numeric computation)

Computing the Approximate Multivariate Greatest Common Divisor via Rational Function ……97
Masaru Sanuki

A note on required precision for computing numerical Groebner basis of xact input …… 104
Kosaku Nagasaka

Session 7 (Linear algebra and algebraic equations)

On determining the structure of the invariant space of matrices via pseudo-annihilating polynomials …… 113
Katsuyoshi OHARA, Shinichi TAJIMA

Calculating eigenvectors of matrices using candidates for minimal annihilating polynomials II ····· 119
Shinichi Tajima, Akira Terui

Computing the longest polynomial in the world - general discriminant formula of degree 17 - ·····128
Kinji Kimura
